Profile

A passionate, self-taught web developer with a tenacious curiosity.

Technical Skills

Adobe Creative Suite

Balsamic

Bootstrap / Foundation

CSS3

Django

Git

HTML5

Jade

Javascript

Jekyll

Mojolicious

SASS / LESS

Sketch

WordPress

Objective

Desire a junior front-end developer position that immerses me in a challenging environment that will strengthen my current skill set while at the same time offer me various opportunities to learn new languages, frameworks, trends and best practices.

Experience

RunningOnVenti.com // 2016- Present

Front-End Developer / Designer

Designed and developed a blogging site for a freelance client complete with customized WordPress Plugins. Designed in Sketch, developed with WordPress, SASS and Gulp, and managed - as always - with Git.

MHLan.com // 2015- Present

Front-End Developer / Designer

Worked with a back-end developer to build a responsive event site for LAN parties using Mojolicious. Designed in Adobe Illustrator, developed via SSH, and managed by Git.

ClassInc.org // 2015- Present

Marketing Assistant, Web Design Consultant

A redesign using the non-profit's preferred: Weebly. Created reoccurring template and layout styles, managed the collections of various media assets and used jQuery to create various necessary functions not supported by Weebly.

Textrade.us // 2015 - 2016

Front-End Developer

Designed and developed a responsive web-app within the Django framework. Collaborated with a back-end developer, founders of Textrade, and beta testers to create a fluid user experience unique to the audience. Developed and launched the site in four months which placed in various competitions.

LunenburgGiftmart.com // 2014 - Present

Front-End Developer

Redesigned and developed the non-profit's site into a multi-page layout with a new, intuitive registration system. Worked alongside a back-end developer to create the project using Mojolicious and Bootstrap.

Projects

Artist Theme // 2016

ninapetrop.github.io/Artist-Theme/

In an attempt to learn Jekyll, a static-site generator, and master flexbox, I created a free Jekyll theme entitled Artist Theme. Complete with responsive design, parallax effects, free of Bootstrap, and powered by Gulp, Artist Theme has been forked on GitHub 29 times and has received 19 Stars.

Technical Skills.
